

# ARCHIPEL I

GALAPAGOS

ITINERARY **B5** 5 DAYS / 4 NIGHTS  
Thursday to Monday

## ROUTE

### Day 1 - Thursday

Arrival at Baltra airport  
Fausto Llerena Breeding Centre  
(Santa Cruz)

### Day 2 - Friday

Comorant Point and Devil's Crown  
Post Office Bay and Baroness Lookout  
(Floreana)

### Day 3 - Saturday

Osborn Islet and Gardner Bay.  
Suarez Point (Española)

### Day 4 - Sunday

Pitt Point  
Witch Hill

### Day 5 - Monday

Lobos Island  
Transfer to San Cristobal airport

## HIGH CHANCE OF SPOTTING

## DAY 1 - THURSDAY

### AM - Arrival at Baltra airport

Upon arrival at San Cristobal airport, you will pass through an airport inspection point to ensure that no foreign plants or animals are introduced to the islands, as well as to pay the park entrance fee of \$100 (unless it has been prepaid). A guide will meet you, help you collect your luggage, and escort you on a short bus ride to the harbour.

### PM - Fausto Llerena Breeding Centre (Santa Cruz)

At this site, you can observe tortoises that come from various islands of the archipelago. They comply with the captive breeding programme and then return to repopulate the areas where their population has been affected. The land iguanas of Santa Cruz, Isabela and North Seymour are also in a captive breeding programme, as the populations in these areas suffered from feral dogs.

One of the main attractions is the famous embalmed Lonesome George. Estimated to have died between 93 and 109 years of age, it is recognised as the last of its kind and a symbol of the efforts invested to conserve endangered species. The captive tortoises are used to the presence of visitors, so it's a great place to take photos with them.

## DAY 2 - FRIDAY

### AM - Cormorant Point and Devil's Crown (Floreana)

The peninsula of Cormorant Point forms the extreme north cape of Floreana, which exists out of smaller volcanic cones, covered by a tropical dry forest of palo santo. At the landing beach, you will be welcomed by a small Galapagos sea lion colony. The green sand on this beach contains a high percentage of glassy olivine crystals which have been blown out by the surrounding tuff cones. The "flour sand" beach on the southern side of the peninsula is made up of even finer white coral sand which feels very smooth on the feet. Parrotfish have pulverised it, grinding the calcareous skeletons of living coral. You can spot schools of stingrays who love the sandy bottom to hide. During the first months of the year, Pacific green turtles come ashore to bury their eggs.

Devil's Crown offers one of the best snorkelling spots in the Galapagos due to the coral reef in its centre, which attracts a lot of marine life. Here you can spot Galapagos penguins, sea lions, sea turtles, many different colourful fish and even some dolphins. The current can be a bit strong sometimes, so it should not be attempted by novice swimmers.

### PM - Post Office Bay and Baroness Lookout (Floreana)

Historically, this site is the location of a wooden barrel that was placed there in the 18th century by the crew of a whaling ship. Letters found inside the barrel were collected and delivered by sailors returning home. There was no postage fee and, surprisingly, this mailbox and its honour system are still in use today. Although letters are no longer important messages from sailors to their loved ones, tourists leave thousands of them today and many still reach their destination. You can also relax on the beach, where in addition to Galapagos sea lions, Pacific green turtles and golden rays, you may see Galapagos penguins. This is the only place in the southeastern archipelago where penguins reside. You can also climb the small basaltic cone of the Baroness Lookout and enjoy the coastline's paradisiacal views. This viewpoint was the favourite spot of one of Floreana's first settlers, the eccentric baroness and self-proclaimed "Empress of Galapagos" Eloisa von Wagner, who even built her house a few metres further back.

## DAY 3 - SATURDAY

### AM - Osborn Islet and Gardner Bay(Española)

The striking white beach at Gardner Bay is an important breeding site for Pacific green turtles. However, without a doubt, its main attraction is the Galapagos sea lion colony. Females stay year-round in this nursery, suckling their pups until they are three years old, although they start to fish at five months. During the breeding and mating season, the colony becomes even bigger.

### PM - Suarez Point (Española)

Huge ocean waves crash onto the southern basaltic cliffs of Suarez Point, forming a spectacular blowhole, where the water sprays metres high into the air (depending on the season, the tide and how strongly the sea breeze pushes the waves). Take your time for a meditative break in silence on this emblematic viewpoint, and convert this unforgettable moment into a lifetime experience.

## DAY 4 - SUNDAY

### AM - Pitt Point

Two wind-sculptured tuff cones at Pitt Point make up the extreme eastern end of San Cristobal, thus the archipelago. These cliffs were the first sight of land when HMS Beagle and Charles Darwin arrived on the 15th of September, 1835. On the small green sand beach, you will be welcomed by a group of barking Galapagos sea lions. This is a bachelor colony, where males usually relax and prepare themselves for fighting and mating.

### PM - Witch Hill

This site's primary attraction is the coral sand beach, an excellent place to swim and snorkel. Witch Hill is the remains of a tuff cone and one of the first sites visited by Charles Darwin. It has an impressive landscape, where it is often possible to see coastal and migratory birds, including pelicans, blue-footed boobies and swallow-tailed gulls; as well as sea lions and marine iguanas. At times, the lagoon is completely dry and deposits of salt can be found at the bottom. The people of Puerto Baquerizo Moreno used to use the lagoon as a salt mine.

## DAY 5 - MONDAY

### AM - Lobos Islet

The Lobos Islet's beach harbours a colony of Galapagos sea lions. As in other colonies in the archipelago, you can approach nurturing females within a few metres. In the breeding season, this colony is also visited by territorial males, defending and mating the harem on their part of the beach. This low islet is home to more than just Galapagos sea lions. Two other emblematic species breed here: male blue-footed boobies and great frigate birds who try to impress the females (and tourists) with clumsy dances, heaving their striking blue feet or blowing up their balloon-sized scarlet pouches. During the breeding season, the fluffy and hungry chicks cry for food, and when their wings get strong enough, they will learn to fly.

After this, assisted by the naturalist guide and some crew members, you will be taken to San Cristobal airport. It has been a pleasure accompanying you on this unique trip and we hope to see you again very soon!
